.NET Reporting up to date with combit Report Generator

List & Label 14 supports Delphi Prism

At this year's PDC, Embarcadero Technologies presented their new .NET product Delphi Prism .NET, and without any delay the software house combit has been able to adapt their reporting tool to support it. Thanks to this List & Label now seamlessly integrates into projects of this new .NET-Windows-development platform.

Delphi-Prism is based on the product Oxygene (previously known as Chrome) from RemObjects and can be used as a plug-in for Visual-Studio. By using this platform, Delphi developers take advantage of new .NET technologies such as WPF, Silverlight, ASP.NET or LINQ. The new tool enables them to conquer platform, framework and even database barriers.

combit has been supporting Chrome for the past two years, actively following its development. So the sample included for Chrome or Oxygene can now be used in conjunction with Delphi Prism.

List & Label 14 starts at EUR 610 / USD 778. Based upon exchange rates from Nov 19, 2008. Exchange rates may vary which could cause a change in the USD price. With the fully program-mable free trial version developers can test the features of the reporting component.

List & Label Product Description

With List & Label developers can equip their own applications easily and quickly with efficient functions to assist in the areas of reports, statistics, forms, lists and labels. Only a few lines of code are required to integrate the report generator into existing applications. The Designer of List & Label 14, which can be passed on to end users without having to pay additional license fees, is currently available in 6 languages. The development tool for extensive reporting functions as well as web reporting is available in German or English and can process almost all character sets. All three editions of List & Label can be integrated into a large variety of programming languages.
