List & Label 15 is Compatible with Windows 7

List & Label 15 is Compatible with Windows 7 Windows 7-Specific Features for Reporting in the Third Dimension

Constance, 10/22/2009 - Software manufacturer combit reports: Version 15 of reporting tool List & Label, set to be released at the beginning of November, has successfully concluded the certification process for Windows 7. Features specific to Windows 7 ensure that List & Label runs flawlessly under the new Microsoft operating system.

"One of the most interesting new additions in Windows 7 is the taskbar with extended functions," explains List & Label project manager Jochen Bartlau. "We wanted to make development as smooth as possible." In List & Label 15, special care was taken for the icon in the taskbar. It also supports the Aero Peek function. In Windows 7 information on the progress of running processes is displayed within the taskbar icon. This means that users no longer have to bring the window to the foreground, as they can immediately see the progress of document printing for example. Applications that use List & Label 15 benefit straight away, according to combit, and without any changes from the new feature. In Windows 7 users obtain information even more quickly with Aero Peek. Hovering the cursor over the icon displays a small preview. Moving the cursor over the preview displays the window in the foreground. List & Label 15 supports this handling automatically for designing and printing.

About List & Label:

With the combit List & Label reporting component, developers can equip their own applications easily and quickly with efficient functions to create reports, statistics, forms, lists, and labels. The Designer is available in many languages. Only a few lines of code are required to integrate the report generator into existing applications. The development tool for extensive reporting functions as well as web reporting is available in German or English. It can be integrated into a large number of programming languages, among others .NET, and can process almost all character sets.
