List & Label Free Edition

Free Edition of Reporting Component List & Label Manages Intelligent Mail Barcode More than 50 Barcode Formats Supported by Free Reporting Tool

Constance/Germany, 05/19/2011 – German software manufacturer combit reports that the Free Edition of Reporting Tool List & Label can manage more than 50 kinds of barcodes; among others the Intelligent Mail Barcode, which is required for bulk mail in the USA. The fully functional Free Edition offers almost the complete range of features of the Standard Edition worth over 850 US\$.

"With the List & Label Free Edition we offer software developers a great tool for generating a huge variety of barcodes and other report objects with their applications," explains List & Label project manager Jochen Bartlau. He continues: "In comparison to other report generators List & Label provides the most flexibility regarding the type of data that can be reported, the variety of programming languages supported and the number of export and barcode formats provided." The List & Label reporting component has been available for over 18 years and there are many enthusiastic customers (i.a. Shell Oil Products, Siemens) and press reviews worldwide. According to Jochen Bartlau the Free Edition of List & Label represents a great opportunity: "If software developers want to use a well-proven high-end component in their application, but hesitate to invest hundreds of dollars, the List & Label Free Edition should spring to mind as the report generator of choice."

List & Label Free Edition supports many export formats like PDF, HTML, RTF, XML and XLS. It integrates quickly and supports a large number of development environments. In contrast to the paid editions, the List & Label Free Edition does not benefit from the unlimited run time of the List & Label Designer, and a watermark appears on each printout and export file. However, the end user can acquire an unlock code for only EUR 29 / US\$ 41 (exchange rate as of 05/10/2011) to remove the watermark and to access the Report Designer to enhance reports by adding a company logo or letter head. The developer can upgrade to a full List & Label edition at any time.
